

How do you design for future smart grids?

Advanced metering infrastructure... smart grid... automation... demand response ... meter data management... stimulus grants... regulatory hurdles... customer acceptance... standards... return on investment...

So many decisions, so much change. You know each choice affects the other but how do you integrate the elements, manage the risk of obsolescence, and continue to deliver reliable, quality service at a reasonable cost and a favorable rate of return?

Balancing technology risks with business imperatives has never been harder. KEMA leverages 80 years of utility technology knowledge and its expertise in global business consulting to help you map a strategy, design a system, test components, deploy new infrastructure and reap the rewards. With a focus on smart integration, KEMA provides solutions that help you maximize business outcomes while minimizing future technology risks.
